IMPROVING THE ONION PRODUCTION IN AUTUMN / WINTER CICLE

**1st FASE: Rooting and start of
Vegetative Development**

BULB PREPARATION

Radicular Application

Recommendation:

To achieve a shallow horizontal bulb without waterlogging (this situation, if successful, causes root asphyxia and encourages fungal attack).

EDYPRO HUMECTANTE

20 L. / ha.

Applied in a single irrigation dissolved from the first to the last drop. The duration of this irrigation will never exceed 2 hours.

ROOTING AND FAST DEVELOPMENT OF THE ROOT SYSTEM

Radicular Application

COUPÉ REGENERACIÓN Plus

60 L. / ha.

ENRAIZANTE ESPECIAL

10 L. / ha.

Repeat in 12 days:

COUPÉ REGENERACIÓN Plus

80 L. / ha.

ENRAIZANTE ESPECIAL

5 L. / ha.

Thrips problems in onion cultivation

REVOLUTION is a new generation product whose action through the serum effect is capable, if continuous applications are made, of controlling the thrips population and allowing the cultivation to be successfully carried out.

Foliar Application

REVOLUTION

5 L. x 1000 L.

MELASTOP

2 L. x 1000 L.

Treat at sunset and wet deeply. As it is a Zero Residue product, it can be applied 3 times a week without negative effects on the crop.

It can be applied alone or in combination with other treatments.

It is compatible with the auxiliary fauna used to control thrips such as the Orius.

ROOTING AND RAPID DEVELOPMENT OF THE FOLIAR SYSTEM

Foliar Application

HYDROCAL

3 L. x 1000 L.

EDYFOS

0,75 L. x 1000 L.

BOTCAR

3 L. x 1000 L.

ENDOFOSTEC

5 L. x 1000 L.

MELASTOP

2 L. x 1000 L.

NOTE: Carry out 3 passes 10 days apart and add the chemical fungicide and/or insecticide that is considered.

biotecnologia

IMPROVING THE ONION PRODUCTION IN AUTUMN / WINTER CICLE

2nd FASE: Vegetative Development

STEM DEVELOPMENT AND VEGETATIVE RHYTHM

Foliar Application

HYDROCAL 3 L. x 1000 L.

**ENDOFOSTEC or
CUPRO-PLUS MAX**

5 L. x 1000 L.

MELASTOP

2 L. x 1000 L.

Associated with conventional fungicide treatments

NOTE. It is very important to look for the anti-stress effect caused by fungicides. For this we recommend accompanying the treatments with:

ALGATRON

2 L. x 1000 L.

biotecnologia

IMPROVING THE ONION PRODUCTION IN AUTUMN / WINTER CICLE

3rd FASE: Maturation

MATURATION PLAN AND RAPID BULB DEVELOPMENT

Radicular Application

ORGANOVITAL PLUS

60 L. / ha.

After 12 Days:

GROSKOLOR PLUS

80 L. / ha.

MATURATION PLAN AND RAPID BULB DEVELOPMENT

Foliar Application

EDYMAG

2,5 L. x 1000 L.

MAX QUALITY

4 L. x 1000 L.

CA-FRUIT

2,5 L. x 1000 L.

ENDOFOSTEC

5 L. x 1000 L.

MELASTOP

2 L. x 1000 L.

NOTE: Add the fungicide and/or chemical insecticide considered.
